(6) RESISTANCE VALUE
$1 \Omega$ to $22 \mathrm{M} \Omega$
There are $2 \sim 4$ digits indicated the resistance value. Letter $R / K / M$ is decimal point, no need to mention the last zero after R/K/M, e.g. I K2, not I K20.
Detailed coding rules of resistance are shown in the table of "Resistance rule of global part number'.
(7) DEFAULT CODE

Letter $L$ is the system default code for ordering only. (Note)

## Ordering example

The ordering code for an AC0402 chip resistor, value $100 \mathrm{~K} \Omega$ with $\pm 1 \%$ tolerance, supplied in 7 -inch tape reel is: AC0402FR-07I00KL.

## NOTE

I. All our R-Chip products are RoHS compliant and Halogen free. "LFP" of the internal 2D reel label states "Lead-Free Process".
2. On customized label, "LFP" or specific symbol can be printed.
3. AC series with $\pm 0.5 \%$ tolerance is also available. For further information, please contact sales.

## NOTE

For further marking information, please refer to data sheet "Chip resistors marking". Marking of AC series is the same as RC series.

## CONSTRUSTION

The resistors are constructed on top of antomotive grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive glaze. The resistive glaze is covered by a protective glass.
The composition of the glaze is adjusted to give the approximately required resistance value and laser trimming of this resistive glaze achieves the value within tolerance. The whole element is covered by a protective overcoat. Size 0603 and bigger is marked with the resistance value on top. Finally, the two external terminations ( $\mathrm{Ni} / \mathrm{matte}$ tin) are added, as shown in Fig.8.

## RAted voltage

The DC or AC (rms) continuous working voltage

Fig. I0 Maximum dissipation ( $\mathrm{P}_{\max }$ ) in percentage of rated power as a function of the operating ambient temperature ( $\mathrm{T}_{\mathrm{amb}}$ ) corresponding to the rated power is determined by the following formula:

$$
\begin{aligned}
& V=\sqrt{(P \times R)} \\
& \text { Or Maximum working voltage whichever is less }
\end{aligned}
$$

Where
$\mathrm{V}=$ Continuous rated DC or AC (rms) working
voltage (V)
P = Rated power (W)
$R=$ Resistance value ( $\Omega$ )
